

New Construction Company to Receive ISO 9001:2000 Certificate

High quality, effective service and the best supply system – these are a few of the things that distinguish the New Construction Company (NCC) from its competitors. The company aims to create an ideal environment for successful operations with its partner companies and for that reason the company offers original architectural products equipped with a state-of-the-art engineering system, the highest quality service as well as international security standards.

The NCC is proud of its activities and the projects it has implemented in Georgia and chalks up the company's accomplishments to the effective management jointly carried out by a foreign and Georgian managerial team. "We work with European and Georgian consultants to perform quality and attractive modern work. Based on our experience we can offer diverse management options in design and at the same time in construction, which is quite rare in Georgia nowadays. We work hard to be competitive and a good management system is the core of a solid business," pointed out NCC General Manager Ercan Gunes.

This is precisely why the company has developed a worldwide business management system and will receive the ISO 9001:2000 certificate, which represents the frame-convention in modern business for achieving commercial goals. To this end, the company has been cooperating with the official representation of TAV (Technical Control Association) in Georgia which carries out auditing and supervision and presents awards with a certificate in the field of management. In a few days, the New Construction Company will officially receive an ISO 9001:2000 quality certificate in management, which will represent one more successful step by the company to become a leader in the county's construction market.

"More than ten thousand companies have been awarded the quality certificate nowadays, which is something that assists in their promotion and international recognition. When selecting business partners, leading companies in all spheres of the global economy prefer to cooperate with organizations which have an ISO 9001:2000 certificate. We will become the only company which has such a certificate in Superstructure Construction field," explained the head of the company and added that such recognition will help the company develop its flexibility, raise its profile, improve relations with shareholders, and increase the motivation of company

personnel – all of which are of the utmost importance for the good of society.

The New Construction Company aspires to become the leader of in its competitive market by entirely meeting all its customers' requirements and thus obtaining their trust. The company's policy is to constantly work to raise the quality of its construction-installment works and its level of perfection.

New Mechanical Company

"We started our business with huge plans, and we have gradually achieved success. Our goals were initially oriented mainly towards

providing high quality and meeting our clients' requirements. Surveys carried out by our company prove that there is currently great demand for an experienced and professional approach towards mechanical systems and it was precisely this which led us to form a joint venture with our Turkish partners, the New Mechanical Company (NMC), which mainly works on heating, ventilation and air fan systems. Our partner is the company Sim-tes, which has 35 years of experience in various countries, including Ukraine, Uzbekistan, Kazakhstan, Turkey and now Georgia," Gunes explained.

The Mystery of NCC's Success

The company has been perpetually trying to improve its quality management system, elevate the quality of its construction works and to gain consumer trust through a client-oriented policy. The company strives to maintain close relations with its customers and to become comprehensively familiar with their desires and expectations, as well as to provide them with the maximum amount of information about the company's capabilities with regard to project implementation. NCC carefully considers its clients' claims and resolves all problems in the shortest possible period through the employment of qualified personnel for the realization of new projects. With the goal of improving productivity, the company management is committed to creating a proper working atmosphere for all its employees.

NCC was established in 2005 to build industrial enterprises, offices and residential buildings in Georgia. The New Construction Company has undertaken construction projects for the GRDC and TBC Bank from the very day of its formation. The company's team has successfully carried out several important projects in Georgia, including the construction of the new US Embassy complex. Ercan Gunes was in charge of that project and after its completion he decided to join with NCC.

NCC is a traditional construction company and not a developer. "Our plans have been basically oriented towards carrying out high quality construction works as well as meeting clients' requirements. Any other step made by the company stems from that purpose," added Gunes.

Another distinguishing feature of the company is the quality of its work and its unique manner – something which is also proven by the ISO 9001:2000 which the company will be awarded soon.
